TOGAF® Poster Series #12
Releases and Versioning of Architecture Deliverables
by Roger Evernden

Good e-Learning

TOGAF recommends using release and version numbers to keep track of the latest edition of each deliverable.

In this poster you'll see how to apply this to outputs and inputs from the ADM. We also show an example of versions of the domain architectures in Phases A, B, C and D.

» **Objectives:** the major goals & purpose for the Phase

» **Approach:** thoughts & references relevant to the Phase

» **Inputs:** deliverables or artefacts required to complete the Phase

» **Steps:** tasks required to complete the Phase

» **Outputs:** deliverables or artefacts produced or updated during the Phase

» **Phase A** creates a high-level draft of the Business, Data, Application & Technology Architectures

» The draft versions become a "final" output during the relevant domain architecture Phase (B, C or D)

» In subsequent iterations additional versions might be used, e.g. 0.2, or 1.2

**FOR EACH PHASE, TOGAF DESCRIBES 5 ASPECTS:**

| OBJECTIVES | APPROACH |
| INPUTS | STEPS | OUTPUTS |

OUTPUTS ARE CREATED IN EACH **ADM** PHASE

STEPS INCLUDE VIEWS, ARTEFACTS, BUILDING BLOCKS, DELIVERABLES, ETC...

AND BECOME **INPUTS** TO SUBSEQUENT PHASES

VERSION 0.1
- A high-level outline or draft
- Changes during architecture development

VERSION 1.0
- A detailed output
- Subject to stakeholder review & sign-off

Phase	Deliverable	Content	Version
A: Architecture Vision	» Architecture Vision	» Business Architecture	0.1
		» Data Architecture	0.1
		» Application Architecture	0.1
		» Technology Architecture	0.1
B: Business Architecture	» Architecture Definition Document	» Business Architecture	1.0
C: Information Systems Architecture	» Architecture Definition Document	» Data Architecture	1.0
		» Application Architecture	1.0
D: Technology Architecture	» Architecture Definition Document	» Technology Architecture	1.0
