TOGAF® Poster Series #4
TOGAF Skills Framework
by Roger Evernden

Good e-Learning

There are many words used to qualify the term 'architect' e.g. Business architect, solution architect, etc…

The roles and their skills can be confusing.

Superficially, the Skills Framework helps sort this out, but when you use it quickly, it becomes clear that it needs customization and adaptation.

This Skills Framework overview and how to use it will help.

1 *Start with the TOGAF checklists, but customize them to your needs*

2 *Adapt the TOGAF roles and their skill ratings to meet your needs*

3 *Rate EA team or applicants, and improve skill gaps!*

SKILLS CHECKLIST

GENERIC
teamwork • inter-personal • oral communications
leadership • written communications • logical analysis
stakeholder management • risk management
